

Ready for testing the prototypes of personal learning environments supporting STEM

IMAILE seeks **innovative technology to support STEM** (Science, Technology, Engineering and Mathematics based subjects) **personalized learning in Primary and Lower Secondary** Education at the EU level. The project started in February 2014 and we are now entering our last project year in 2017, devoted to the implementation of tests in schools in different countries. IMAILE is a unique project within learning technologies being the first **pre-commercial procurement (PCP)** project within the European sector of Education.

After the first two phases in the selection process of **IMAILE Pre-Commercial Procurement two awarded prototypes** started into the testing phase in January 2017. This year, two IMAILE prototypes of future personal learning environments (PLE) will come to different schools to be tested **with teachers and students in real scenarios**. IMAILE procurers have selected schools in four countries to provide real classroom testing environments to our suppliers. The active Primary and Secondary schools who are to try out the innovations and provide feedback are from:

- Sweden – Halmstad municipality
- Finland – Konnevesi
- Spain – City council of Viladecans
- Germany – Region Saxony Anhalt

Keep up to date at IMAILE School portal
<http://imaile.eu/school-portal>

This is a unique opportunity for selected schools to participate in a co-design process to shape these PLEs to meet the users demands and expectations of the future.

Recognition of IMAILE teachers/schools

IMAILE project is extremely grateful for the important work that teachers and students will be doing when testing the two PLE prototype solutions during 2017. Therefore, we would like to promote our appreciation by awarding, at the end of the testing period, the schools and teachers an IMAILE certification and digital badge to verify the skills of the co-design process and user driven innovation experience.

We proudly present the IMAILE prototypes ready for testing

YipTree is a personal learning environment (PLE) made by using latest web technologies that brings high performance and easy-to-use user interfaces for end-users. Our modern user interface is specifically designed for students and teachers in primary and secondary schools. YipTree is a cloud service that can be used with any device and can be accessed anywhere with single sign-on for all integrated services.

AMIGO is a flexible, scalable and cost-effective cloud-based digital learning ecosystem that delivers a user-driven and adaptive technological solution focused on STEM. AMIGO allows the guided acquisition and evaluation of knowledge and competences, helping teachers and students to achieve a more personalized learning and better results in STEM domains, and prove their acquired abilities in view of their entry on the labour market.

Future plans

After finalising our project in January 2018 IMAILE is planning to prepare phase 4 (PPI-Public Procurement of Innovation) to lead the finally selected prototype into commercialisation.

In order to strengthen this work we develop a proposal to the following H2020 call: <http://ec.europa.eu/research/participants/portal/desktop/en/opportunities/h2020/topics/ict-33-2017.html> (theme A). We will create a network of European procurers for Education, detect common future demands, prepare a PPI & a PCP and create a roadmap that can accelerate the use and development of Education technology.

If your school and education department would like to learn more about this to accelerate and innovate the use of ICT in Education, please contact Ms. Ellinor Wallin (Project manager of IMAILE) ellinor@euprojektkonsult.se.

Save the date and meet us

Final IMAILE conferences

November 2017 - Viladecans (Spain)

December 2017 - Halmstad (Sweden)

Dates will be announced at <http://imaile.eu> well in advance
